EDUCATION

University of California, Davis

Davis, CA

B.S. in Statistics (Applied Statistics), Minor in Managerial Economics

Graduated June 2026

Relevant Coursework: Regression Analysis, Time Series Analysis, Machine Learning, Econometrics

TECHNICAL SKILLS

Languages & Data: Python, SQL, R, PostgreSQL, SQLite, Microsoft Excel

Libraries & Frameworks: Pandas, scikit-learn, XGBoost, Streamlit, React, Supabase, Chart.js

Analytics: Regression, Data Visualization, Dashboard Development, Time Series Analysis, Forecasting, Machine Learning, Statistical Testing, Data Cleaning, Financial and Operational Analysis

Tools & Credentials: Alteryx, Tableau, Git/GitHub, Jupyter Notebook, RStudio; Alteryx Foundation Micro-Credential; SparkED Datathon Top 100 Finalist

EXPERIENCE

Soaring Eagle Roadlines

June 2026 – Present

Operations & Financial Analyst

Fresno, CA

- Analyzed and reported on **route-level revenue, gross profit, fuel costs, and transportation expenses** in *Excel* to support lane profitability, budgeting, and resource-allocation decisions
- Built a **dispatch command center** using *Python, Streamlit, SQLite, and Pandas* to track active loads, ETAs, empty dates, and backhaul urgency across a **20-truck fleet**
- Reconciled freight transactions and coordinated broker communication, load tracking, and twice-daily dispatch workflows to maintain operational visibility

Aggie Sports Analytics

September 2025 – June 2026

Project Manager, Data Analyst

Davis, CA

- Led a **six-member cross-functional team** and partnered with UC Davis Football stakeholders to gather requirements and translate coaching and strength-program needs into an athlete-performance platform, **reducing film-review workload by 60+ hours weekly**
- Managed project scope, priorities, and development workflows while contributing *React* visualizations, *Supabase* data uploads, and data-quality validation across multi-year athlete records
- Centralized roster, strength, force-plate, NordBord, and performance data previously distributed across spreadsheets, enabling player- and position-level comparisons

SELECTED PROJECTS

ProTech Athlete Performance Platform | [Repository](#)

October 2025 – May 2026

React, Supabase, PostgreSQL, SQL, Chart.js

- Built interactive dashboards, player cards, spider charts, and year-over-year comparisons to surface trends in weight, speed, jumping, strength, and force-production metrics
- Implemented *Supabase* storage and PostgreSQL-backed workflows for athlete metadata, image assets, ForcePlate records, and NordBord records
- Developed an automated, pose-aware athlete image-cropping and upload workflow to standardize profile assets and reduce manual preparation

King County Housing Market Analysis

May 2026

R, Multiple Linear Regression, Statistical Modeling

- Analyzed approximately **15,000 home sales** using multiple linear regression to quantify how structural, quality, and geographic characteristics influence property values
- Compared models using interaction effects, ANOVA/F-tests, standardized coefficients, and diagnostics; found structural characteristics explained **55.7% of sale-price variance**, with construction grade and living space among the strongest drivers

NBA Injury Risk Analysis

April 2025 – June 2025

R, Python, Pandas, scikit-learn, XGBoost

- Analyzed **11,000+ NBA player-seasons** and engineered **26+ predictive features** to evaluate relationships between workload, player characteristics, and injury risk
- Built and evaluated logistic regression, random forest, and XGBoost models, achieving **88.3% accuracy** and **0.956 AUC** while interpreting key risk factors and model limitations
