PROFESSIONAL SUMMARY

Recent UC Davis graduate with a **B.S. in Statistics (Applied)** and a **minor in Managerial Economics**. Experience spans statistical modeling, financial and operational analysis, dashboard development, database integration, and automation. Currently building further depth in **ETL workflows, data pipelines, transformation, validation, and end-to-end analytics systems**.

EDUCATION

University of California, Davis

Davis, CA

B.S. in Statistics (Applied), Minor in Managerial Economics

September 2022 – June 2026

- **Relevant Coursework:** Regression & Statistical Modeling, Time Series & Forecasting, Statistical Data Science, Econometrics, Operations Research, Financial Economics

TECHNICAL SKILLS

Languages & Data: SQL, Python, R, PostgreSQL, SQLite, Microsoft Excel

Analytics: Regression, Forecasting, Time Series, Statistical Testing, Machine Learning, Data Visualization, Dashboard Development, Financial & Operational Analysis

Data Engineering: ETL/ELT Workflows, Data Pipelines, Data Transformation, Data Modeling, Data Cleaning, Validation, Data Quality, Reconciliation

Tools: Pandas, scikit-learn, XGBoost, Power BI, Tableau, Streamlit, Supabase, Docker, Git/GitHub, Jupyter, RStudio

AI & Automation: AI-native workflows, prompt engineering, AI-assisted research, coding, documentation, workflow automation, and output validation

EXPERIENCE

Soaring Eagle Inc.

June 2026 – Present

Operations & Financial Analyst

Fresno, CA

- **Cut daily fleet-tracking time by roughly 50%** by building a *Python, Streamlit, SQLite, and Pandas* dispatch application that surfaced ETAs, empty dates, and backhaul priorities across 20 trucks, reducing missed follow-ups and late searches
- **Accelerated load, truck, and route profitability reviews** by converting revenue, gross profit, fuel, and transportation expense data into decision-ready *Excel* visuals
- **Improved freight-record accuracy and operational visibility** by reconciling transactions, coordinating broker follow-ups, and maintaining current load records through twice-daily reviews

Aggie Sports Analytics

September 2025 – June 2026

Data Analyst

Davis, CA

- **Led a six-member cross-functional team** delivering a UC Davis Football athlete-performance platform now used by coaching and strength staff
- Managed project scope, priorities, and development workflows while contributing *React* visualizations, *Supabase* data uploads, and data-quality validation across multi-year athlete records
- Presented player and position-level findings to coaches, translating dashboard output into training decisions

SELECTED PROJECTS

EstateFlow Housing Market Analytics Pipeline | [Repository](#)

September 2026 – Present

Python, Pandas, PostgreSQL, SQL, Docker

- Built an end-to-end ETL pipeline that profiles and reshapes Zillow home-value and rent data into **validated ZIP-month records** across PostgreSQL staging, intermediate, and analytical layers
- Created a market-metrics mart for annualized rent and gross rent-to-value comparisons, guarded by reconciliation, required-value, positive-value, calculation, and duplicate-grain checks that **catch bad records before they reach analysis**

ProTech Athlete Performance Platform | [Repository](#)

October 2025 – May 2026

React, Supabase, PostgreSQL, SQL, Chart.js

- **Enabled UC Davis Football staff to evaluate athlete development** through interactive dashboards, spider charts, and year-over-year comparisons across weight, speed, jumping, strength, and force-production metrics
- **Replaced fragmented spreadsheet workflows with a centralized data system** by modeling and consolidating multi-year roster, strength, ForcePlate, and NordBord records in Supabase and PostgreSQL

NBA Injury Risk Analysis | [Repository](#)

April 2025 – June 2025

R, tidyverse, caret, randomForest, XGBoost, pROC

- Analyzed **11,000+ NBA player-seasons**, engineered **26+ predictive features**, and evaluated logistic regression, random forest, and XGBoost models, achieving **88.3% accuracy** and **0.956 AUC** while interpreting key risk factors and model limitations
